WHAT SABER DOES

Saber is the workflow engine for high-volume claims and collections. It automates the document- and process-heavy work — intake, triage, eligibility, evidence and payout — with a human in the loop, on top of the systems firms already run. It deploys in weeks, not months, and scales to millions of cases without scaling headcount.

PROOF (GENERALISED — CLIENT FIGURES CONFIDENTIAL)

- Millions of cases processed across live operations.
- Teams handling many times their previous caseload — without adding headcount.
- 98%+ document classification accuracy.
- Live on a client workflow in weeks, with a 100% audit trail.
